What we do?

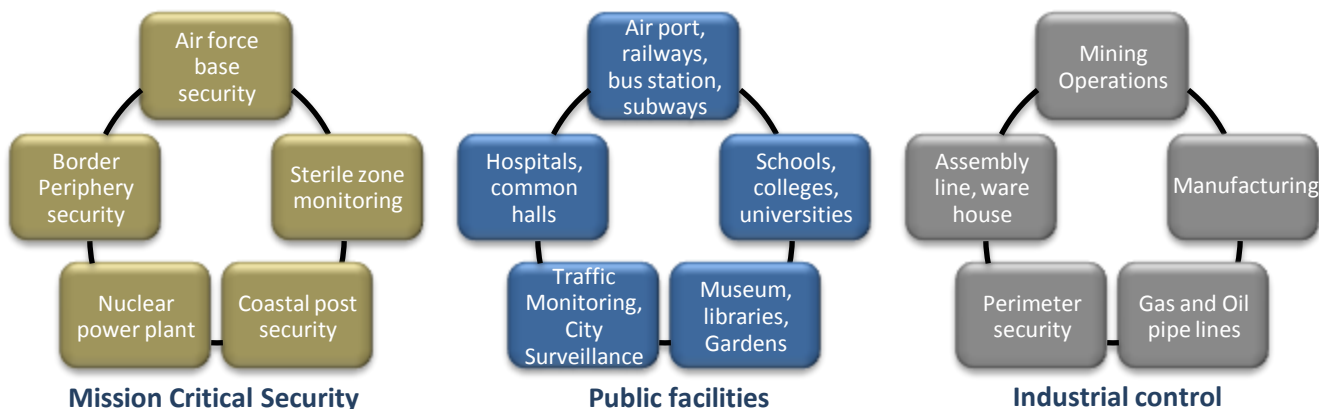

IP Video Management System

i2V VMS is unique in itself with advanced Client - Server Architecture and integrated Video Analytics. i2V's Incident-Event-Action framework further strengthens the whole solution with advanced Alarm Event Management over multiple devices. These are some features of VMS:

- Two ways audio.
- Compatible with more than 40 camera brands
- Intuitive graphical user interface
- Supports MJPEG, MPEG4, H.264
- Video wall with custom screen layouts
- Fail-over & Redundancy
- Exceptional scalability
- Supports any IP video device
- Scalable IP Video Management
- Built-in Integrated Video Analytics
- Detection events Alarm Management
- Open framework for device integration

VMS Key Functions

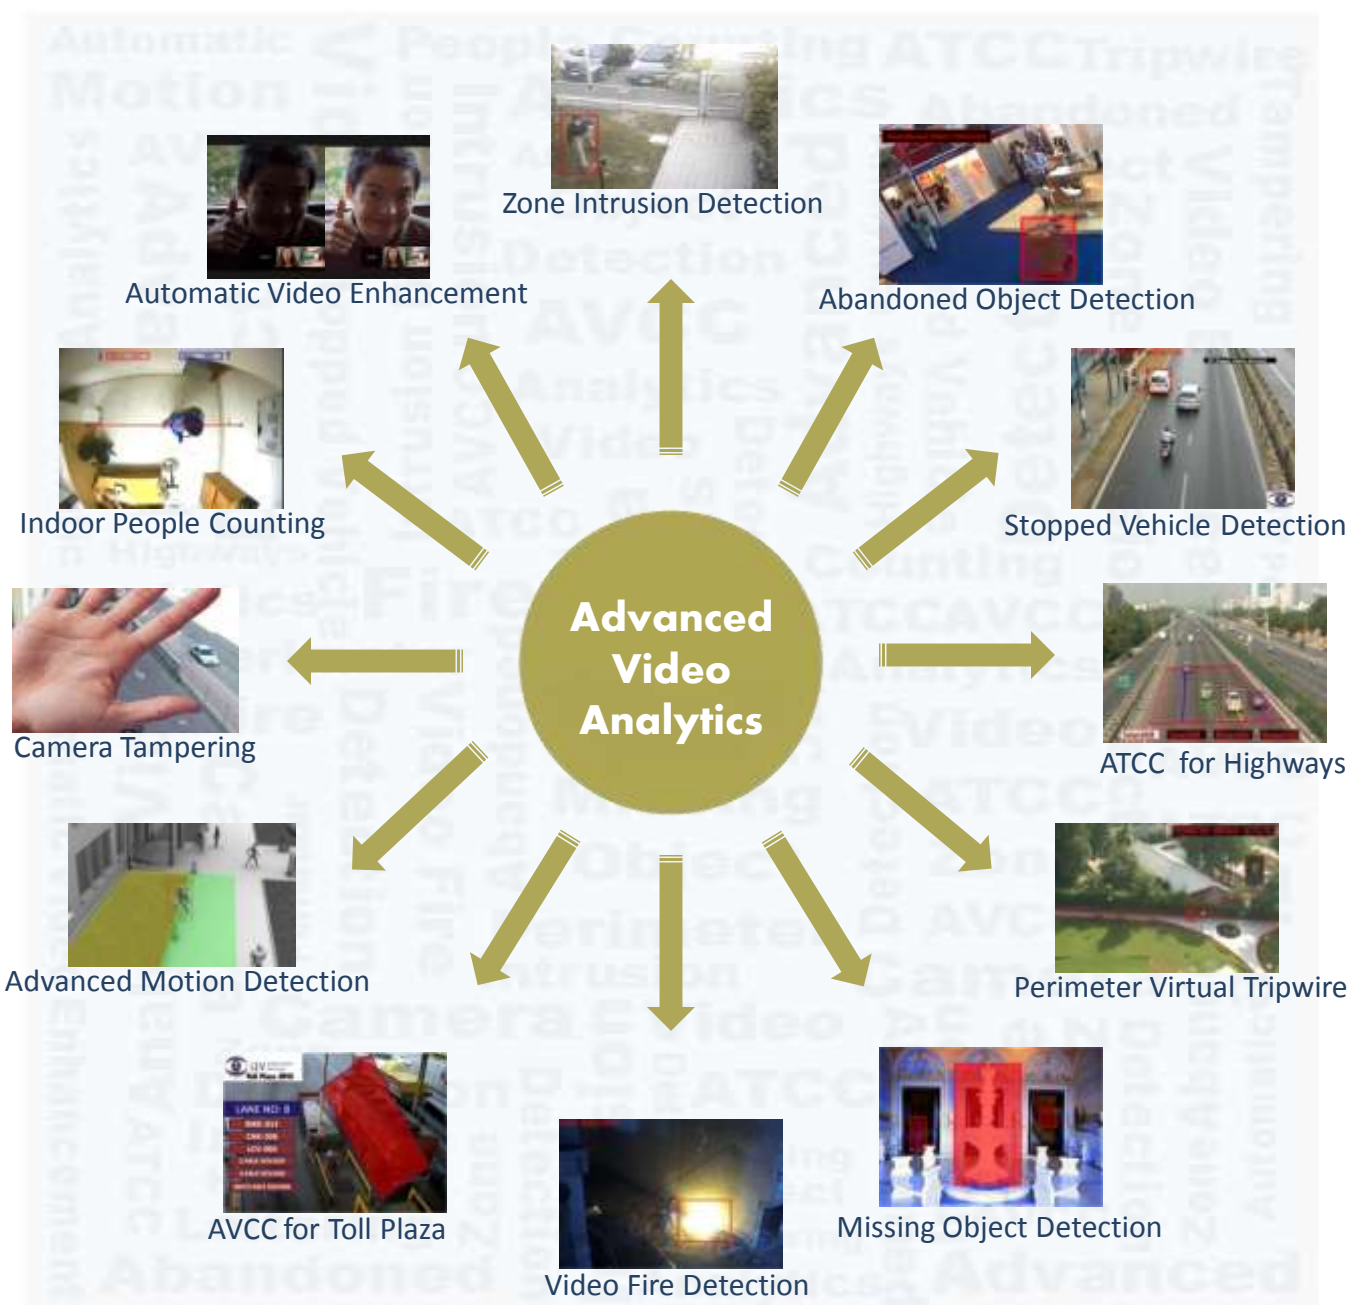

Some Targeted Industry Domains

Advanced Video Analytics

i2V software has in built comprehensive cluster of advanced Video Analytic Algorithms. Each Video Analytic Module is coupled with Incident-Event-Action framework. i2V Video Analytics are equipped with False Alarm Suppression Technology (FAST) which minimizes false alarms and further strengthens the solution reliability

i2V claims to provide best quality video analytics. We are highly stringent with the accuracy level of analytic and this is the reason our customers rely on our products.

i2V supports a wide variety of video analytics which suits most of the surveillance scenario.

Command and Control using Third Party Device Integration

i2V Video Solution is equipped with Command and Control Center(CCC) which is an essential feature of modern security and surveillance systems. It can facilitate the control over the complete security management of the wide spread third party devices like Fire alarm, Burglar alarm, Perimeter Intrusion Detection System, Radar sensor, Motion sensor, Access control devices, DVRs etc., in multi-site video surveillance operations.

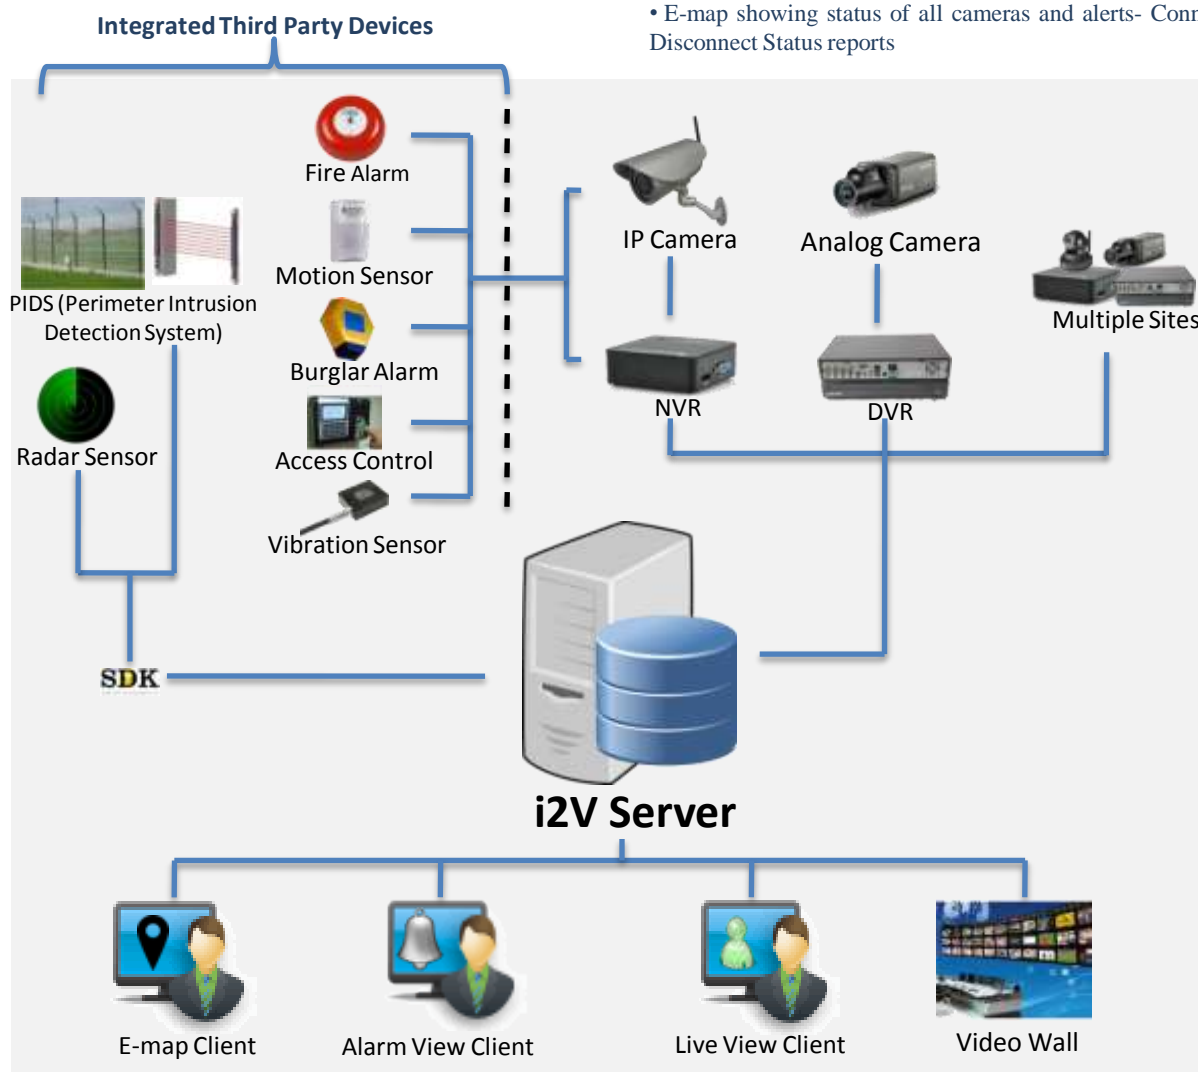

With i2V's CCC, instant simultaneous access of thousands of cameras and devices is possible, enabling operators with highly collaborative control room management.

Central Management System

Central Management system or Monitoring system is a system which can connect all the cameras and third party devices located at multiple locations or sites at a central hub. Through CMS, you can view, control, receive alerts & notifications from any camera or third party device, located anywhere in the system.

Key characteristics:

- Centralized Video monitoring of Unlimited cameras spread across multiple branches and cities
- Groupings based on Branch, City, State, Country, Sensitive, Important branches.
- Alerts in central station like.- Email, SMS, Sound alert.
- Video Analytics alerts: Camera Tampering , Intrusion in branch, Missing object, Perimeter Violation.
- Situation Management by defining appropriate actions and acknowledgement for alerts
- E-map showing status of all cameras and alerts- Connects and Disconnect Status reports

Central Management System (CMS)

Our Products

i2V Systems, specializes in VMS and Video analytics, sells their products as a package of different features, built in it. We have made three product packages on the basis of requirements of different customers for different purposes.

i2V software packages:

i2V Basic Lite: This is most basic software package, used in small premises, small retailer shop, small office, a bungalow or any such places where less than 16 cameras being used.

i2V Professional: This is the flagship product package of our company used in most of the premises like a building, a company, government projects etc. This product is a package of lots of features for example: video analytics,, mobile surveillance, audio recording etc.

i2V Enterprise: This software package is versatile among all. It is used in large projects where number of cameras are more or a Central management system where cameras or devices are situated at multiple premises over the globe. It possess third party integration as well as Command and Control Center features

Here is the description and comparison of features of all three packages:

Small installations ranges up to 16 cameras
